

CLEANVISION

TREATED GLASS

The sparkling beauty of glass in its pristine state of cleanliness is stunning. Unfortunately, that pristine state is short lived, quickly giving way to the challenge of long-term maintenance.

Untreated glass is a surprisingly porous material at the microscopic level. Exposure to typical shower conditions of heat, humidity, hard water, lime scaling, and soap scum results in corrosion, with permanent spots, stains and scale build-up. Over time, glass becomes cloudy, dull and marred, creating a cleaning challenge.

CleanShield utilizes a protective coating which seals the porous surface of glass, providing a protective barrier against corrosion. This protective coating helps to keep your glass "like new" longer and with less cleaning effort.

CleanShield Glass Treatment, powered by EnduroShield®, is a permanent, ultra-thin, transparent coating which seals the glass surface, helping to protect against etching and staining from hard water, lime scaling and soap scum. Similar to the non-stick surface of a frying pan, CleanShield eliminates the need for scrubbing with harsh, toxic detergents, and makes cleaning with water and a mild cleaner easier and more effective. A one-time, permanent application makes grime, dirt, and soap scum up to 50% easier to clean, resulting in glass that maintains its "like new" appeal with less cleaning effort.

CleanShield's superior protection also helps prevent the build-up of mold and harmful bacteria, promoting a healthier shower environment.

ADVANTAGES

- AVAILABLE ON ALL GLASS TYPES AND THICKNESSES.
- SEALS THE GLASS SURFACE, HELPING TO PROTECT AGAINST ETCHING AND STAINING FROM HARD WATER, LIME SCALING AND SOAP SCUM.
- MAKES GLASS UP TO 50% EASIER TO CLEAN. LESS TIME AND EFFORT REQUIRED TO KEEP GLASS AT ITS BEST.
- PERMANENT. NO FOLLOW-UP APPLICATIONS REQUIRED.
- TRANSPARENT. NO DISCOLORATION.
